

## TECHNICAL DATA SHEET

## QUIET WRAP

Soundproofing system

### Product Description and Technical Specification

- Quiet Wrap reduces unwanted noise from traveling through HVAC vents and pipes.
- Quiet Wrap reduces noise traveling to other rooms through the ceiling plenum.
- Can be used on top of drop ceiling tiles and also wrapped around pipes.
- FSK fire rated foil.

The hollow metal tubes, vents and pipes of the Heating Venting and Air Conditioning systems (HVAC) in a building allow sound waves to travel between floors and rooms. Often, the hard, reflective surfaces cause sounds to echo. To reduce unwanted noise, Quiet Wrap covers the outer surface of these conduits.

Sound wave intensity is greatly reduced and unwanted noise is virtually eliminated.

### Recommended Use:

- HVAC ducts
- Wrap around pipes
- Flexible material makes application easy

### Benefits:

- No impact on existing ceiling or appearance
- Reduced noise transfer between rooms
- Fire rated
- Easy installation, no special tools required
- Very flexible
- Easy to cut

### Dimensions:

- 4.5' x 6' Sheet
- 4.5' x 24' Roll

### Technical Rating:

- MLV Density: 1 lb./sq. ft.
- MLV STC: 29
